

IN THE SPECIFICATION:

Page 7, please amend the first full paragraph as follows:

4b) According to the invention, a mark 32 is applied on one or both of oppositely facing, laterally spaced, side surfaces 34,36 of the body 12. As seen in Fig. 1, the mark 32 may be provided at the cushion rubber layer 22 on the load carrying cords therein and on the side surfaces, inside and outside of the cushion rubber layer 22, which engage cooperating pulleys. The mark 32 is formed directly on one or both of the side surfaces 34, 36 in a manner as described below, that directly alters the side surfaces 34, 36. The nature of the mark 32 is not limited and may convey virtually any type of information that is desirable to be placed upon a power transmission belt. As just examples, the information conveyed by the mark may be a company name, a trademark, the month and year of manufacture of the belt, a lot number, a grade, etc. For purposes of generic representation, the mark 32 in Fig. 1 is identified throughout as "ABC".
